

Amendment to the Specification

In the Specification:

Please amend the specification as follows:

On Page 12, the paragraph beginning at line 1 should be replaced with the following.

The term Hyper Text Transport Protocol (HTTP) refers to the communications protocol used to connect to servers on the World Wide Web. Its primary function is to establish a connection with a Web server and transmit HTML pages to the client browser. Addresses of Web sites begin with an http:// or an https:// prefix; however, Web browsers typically default to the HTTP protocol. For example, typing "www.mysite.com" followed by the characters required to connect with a desired uniform resource locator (URL) produces the same effect as typing "http://www.mysite.com" followed by "www" followed by the characters required to connect with the desired URL.
